1 Wishlist

The purpose of this wishlist is to collect ideas on the implementation of usefull features in ACHP.

1.1 Frontend//GUI

1.1.1 Display of the length of the different sections of the evaporator

It would be nice to have a graph illustrating the length of the different sections (subcooled, two-phase, superheated) of evaporator and condenser. Ideally it would be possible to have 2 or 3 runs with different parameters plot into it to illustrate the influence of e.g. an increase of charge.
